Attn.: Bill Pancoast

Re: Asphalt Application

In response to your concerns regarding potential odor and the possible acute effects from the application of asphalt, please find the following information:

- The constituents used in the products have a very low odor threshold, in other words the odors can be detected by sense of smell at very low concentration levels.
- The asphalt used in our products does not qualify for an OSHA Permissible Exposure Limit (PEL). Therefore, a NIOSH approved respirator is not necessary.

I hope this information is helpful to you in your concerns and feel free to contact me if any further information is needed.

Sincerely,

Bill Belardo
